

Department of Civil and Environmental Engineering

Chairperson:	Sadek, Salah
Professors:	Ayoub, George; Basha, Habib; El-Fadel, Mutasem; Hamad, Bilal; Harajli, Mohamed; Kaysi, Isam; Mabsout, Mounir; Sadek, Salah
Professors Emeriti:	Abboud-Klink, Sami; Iliya, Raja
Associate Professor:	Inglessis, Constantine
Assistant Professors:	Abou Zeid, Maya; Assaf, Hamed; Chehab, Ghassan; EL-Khoury, Hiam; Najjar, Shadi; Saad, George; Saikaly, Pascal
Senior Lecturer:	Azar, Kamal
Lecturers:	El Khatib, Helim; El Khatib, Ibrahim; Fawwaz, Youssef; Hatem-Musallem, Manal; Karnib, Ali; Kasti, Fuad; Nader, Halim; Nasreddine, Khaldoun; Sadeck, Salah El-Dinn; Semerjian, Lucy
Instructors:	El Jam, Farah; Haroun, Akram; Hasbini, Hayssam; Huijjer, Carla; Kassab, Maya; Nehme, Elias; Saleh, Maha

Graduate Programs

Master of Engineering and Master of Science Programs

Programs are offered leading to the ME degree in Civil and Environmental Engineering with the following majors:

- Master of Engineering (ME); major, Civil Engineering (CE)
- Master of Engineering (ME); major, Environmental and Water Resources Engineering (EWRE)

Also offered is a program leading to the MS degree in Environmental Science with the following major:

- Master of Science (MS); major, Environmental Technology (ET)

The master's degree programs prepare students through course work and research giving them in-depth knowledge in the various fields of civil and environmental engineering. They provide students with significant research experience, and equip graduates with the necessary tools for professional practice and/or the pursuit of higher education.

Doctor of Philosophy Programs

Two programs are offered leading to the PhD degree in Civil and Environmental Engineering with the following specializations:

- Doctor of Philosophy (PhD); specialization, Civil Engineering
areas of concentration:
 - Structural and Materials Engineering
 - Geotechnical Engineering
 - Transportation Systems
- Doctor of Philosophy (PhD); specialization, Environmental and Water Resources Engineering (EWRE)

Master of Engineering (ME), Major: Civil Engineering (CE)

General Information

The Department of Civil and Environmental Engineering offers two graduate programs leading to the degree of Master of Engineering (ME) major, Civil Engineering (CE): CE Thesis Program and CE Non-Thesis Program. The programs prepare students through course work (and research in the case of the Thesis Program) giving them in-depth knowledge in at least one of the following fields of civil engineering: structures, transportation, and geotechnical engineering. All graduate students must satisfy either the thesis program requirements or the non-thesis program requirements. The program will be indicated on the student's transcript.

Admission Requirements

To be eligible for admission to the civil engineering graduate program a student must hold a bachelor's degree in civil engineering or its equivalent. Engineering graduate students in majors other than civil engineering may be admitted to the program and are required to take prerequisite courses set by the department. Students must also satisfy the requirements of the University and the Faculty of Engineering and Architecture for admission to graduate study, as specified in the relevant sections of this catalogue.

Graduates of universities other than AUB may be required to take undergraduate prerequisite courses to make up for deficiencies they may have. A minimum grade of 70, or its equivalent, is required in each of these courses. No credit, toward the graduate degree, is given for these courses.

Thesis Program Requirements

In order to fulfill graduation requirements in the Thesis Program a student must complete a minimum of 24 credit hours of graduate courses and a thesis based on independent research, equivalent to at least six credit hours. The required course work for the ME degree with a major in civil engineering (Thesis Program) is distributed as follows:

- A minimum of four courses (12 credit hours) in the field of specialty
- A maximum of two courses (6 credit hours) in a relevant field
- A maximum of two courses (6 credit hours) of free electives

Courses in the last two categories need to be approved by the department.

All students registered in the program must take CIVE 797, Civil Engineering Seminar (0 credit), whenever offered.

A minimum of one calendar year of residence is required for graduation. The student must satisfy all relevant FEA and AUB requirements.

Non-Thesis Program Requirements

In order to fulfill graduation requirements in the Non-Thesis Program a student must complete a minimum of 33 credit hours of graduate courses. The required course work for the ME degree with a major in civil engineering (Non-Thesis Program) is distributed as follows:

- A minimum of five courses (15 credit hours) in the field of concentration
- A maximum of three courses (9 credit hours) in a relevant field
- A maximum of three courses (9 credit hours) of free electives

Courses in the last two categories need to be approved by the department.

All students registered in the program must take CIVE 797, Civil Engineering Seminar (0 credit), whenever offered.

A minimum of one calendar year of residence is required for graduation. The student must satisfy all relevant FEA and AUB requirements.

Master of Engineering (ME), Major: Environmental and Water Resources Engineering (EWRE)

General Information

The Department of Civil and Environmental Engineering offers a graduate program leading to the degree of Master of Engineering (ME): major, Environmental and Water Resources Engineering (EWRE). The program prepares students through course work and research giving them in-depth knowledge in the fields of environmental and water resources engineering.

In order to fulfill graduation requirements, a student must complete a minimum of 24 course credit hours as well as a six credit hour thesis. This may be accomplished on either a full, or a part-time basis. A minimum of one calendar year of residence is required for graduation.

The ME program in Environmental and Water Resources Engineering offers two tracks with course requirements as listed below.

Track A

Specialization in Environmental Engineering
 Minor in Water Resources Engineering

Track B

Specialization in Water Resources Engineering
 Minor in Environmental Engineering

Admission Requirements

- To be eligible for admission to the environmental and water resources engineering graduate program, a student must hold a bachelor's degree in any approved discipline of engineering and must satisfy the requirements of the University and the Faculty of Engineering and Architecture for admission to graduate study, as specified in the relevant sections of this catalogue.
- All students admitted to the program are required to take, or to have taken, the following courses, or their equivalent, as prerequisites.

MATH	202	Differential Equations	3 cr.
CIVE	340	Fluid Mechanics and Laboratory	3 cr.
CIVE	350	Environmental Engineering	3 cr.
CIVE	441	Engineering Hydrology	3 cr.
CIVE	450	Water and Wastewater Treatment and Laboratory	3 cr.

- A minimum grade of 70, or its equivalent, is required in each of these courses. Students required to take undergraduate prerequisite courses to make up for deficiencies will receive no credits toward the graduate degree.
- All students registered in the program must take ENSC 690, Seminar in Environmental Sciences (0 credit), whenever it is offered.

Course Requirements

Track A

Course Type **Specialization: Environmental Engineering**
Minor: Water Resources Engineering

Core	Group A1	9
Electives I	Group A2+A	9
Electives II	Group B1+B2	6
Thesis	CIVE 799	6
		Total 30

Track B

Course Type **Specialization: Water Resources Engineering**
Minor: Environmental Engineering

Core	Group B1	6
Electives I	Group B1+B2+AB	12
Electives II	Group A1+A2	6
Thesis	CIVE 799	6
		Total 30

Other relevant graduate courses from any Faculty may be taken as Electives I (up to a maximum of two courses) with the consent of the academic adviser and the approval of the chairperson.

Group A1	Core Courses in Environmental Engineering		Credits
CIVE	649	Microbial Ecology and Molecular Biology for Engineers	3
CIVE	651	Environmental Chemistry and Microbiology	3
CIVE	654	Solid Waste Management I	3
CIVE	656	Air Pollution and Control I	3
Group A2	Electives in Environmental Engineering		
CIVE	650	Methods of Environmental Sampling and Analysis	3
CIVE	652	Environmental Management and Decision Making	3
CIVE	653	Water and Sewage Works Design	3
CIVE	655	Solid Waste Management II	3
CIVE	657	Air Pollution and Control II	3
CIVE	658	Industrial/Hazardous Waste Management	3
CIVE	659	Environmental Impact Assessment	3
CIVE	750	Wastewater Reclamation and Reuse	3
CIVE	751	Air Pollution Modeling	3
CIVE	752	Environmental Case Studies and Conflict Resolution	3
CIVE	753	Processes in Water and Wastewater Treatment	3
Group B1	Core Courses in Water Resources Engineering		
CIVE	640	Hydraulic Structures	3
CIVE	641	Surface Water Hydrology	3
CIVE	642	Ground Water Hydrology	3
CIVE	644	Coastal Engineering	3
CIVE	646	Water Resource Systems: Planning and Management	3
CIVE	647	GIS for Water Resources and Environmental Engineering	3
CIVE	648	Climate Change and Water Resources	3
Group B2	Electives in Water Resources Engineering		
CIVE	643	Hydraulics of Open Channels	3
CIVE	645	Transport Phenomena in Surface and Subsurface Waters	3
Group AB	Common Requirements/Electives in Environmental and Water Resources Engineering		
CIVE	796	Special Projects	3
ENSC	690	Seminar in Environmental Sciences	0
CIVE	798	Special Topics	3
CIVE	799	MS Thesis	6
CIVE	670	Computer Methods in Civil Engineering	3
CIVE	671	Numerical Modeling	3
ENMG	623	Stochastic Models and Applications	3

Master of Science (MS), Major: Environmental Technology (ET)

The Department of Civil and Environmental Engineering offers a graduate program leading to the degree of Master of Science (MS): major, Environmental Technology (ET). The program, which is part of the Interfaculty Graduate Environmental Sciences Program (IGESP), is open to non-engineering students who hold a degree in basic sciences.

For more details on the Environmental Technology program refer to the Interdisciplinary Research Centers and Programs section of this catalogue.

Doctor of Philosophy (PhD), Specializations: Civil Engineering (CE); Environmental and Water Resources Engineering (EWRE)

General Information

Through the PhD programs offered by the CEE department, graduate students are trained to address and solve current challenges in civil and environmental engineering, and to develop theory, methodology, and adequate experimental skills to investigate emerging issues in this domain. In addition, PhD students are trained to be future educators, to participate in industrial research, and to work on interdisciplinary teams. The PhD programs provide training that equips graduate students with the maturity and ability to assume academic and professional leadership roles in various fields related to civil and environmental engineering. These programs address issues and provide solutions which directly contribute to societal progress and development in this part of the world. The objectives of the PhD program are to

- cultivate expertise in specialized concentration areas of civil and environmental engineering;
- develop research skills which include the formulation and study of original ideas as well as development of theory, methodology, and experimental skills;
- promote involvement in inter-disciplinary teams and activities and develop skills pertinent to group and collaborative efforts; and
- acquire teaching expertise through offering class lectures and assisting in courses and labs.

Admission Requirements

Applicants to the PhD program are expected to have demonstrated distinct academic ability. To be eligible for admission to the program, a candidate must:

- hold a master's degree in civil engineering or a related discipline from AUB or another recognized institution of higher learning with a minimum cumulative average of 85 over 100 or its equivalent,
- provide scores for the General Exam part of the Graduate Record Examination (GRE).
- students from non-English-speaking countries must show proficiency in the English language (refer to catalogue section on English Language Proficiency Requirement).
- submit a complete application including a statement of interest, transcripts of academic record from all institutions attended after high school, a curriculum vita, and three letters of recommendation, and
- complete an interview, either in person or by phone.

The application to the doctoral program will follow the deadlines set by the Office of Admissions at AUB. Admission decision for the PhD program is made upon the recommendations of the CEE department and the FEA Graduate Studies Committee, with the approval of the AUB Board of Graduate Studies.

Program Requirements

Course Requirements

The PhD program requires a minimum of 24 credit hours of course work beyond the master's degree and 24 credit hours of dissertation work. The course work consists of a minimum of 12 credits in the area of concentration within a major, six credits in a related area, and six credits in an area other than the candidate's field of research, which can be taken inside or outside the department. Courses selected must be approved by the graduate student's adviser. It is expected that the student will be involved in setting a plan of course work with the help of the dissertation adviser that is consistent with the area of research.

Candidacy Requirements

Comprehensive Exam

All students admitted to the PhD program must successfully complete a written comprehensive examination administered by the department. The purpose of the comprehensive exam is to ascertain the student's knowledge in his/her field of specialization and related areas. The written exam will cover major topics from within the concentration area and related fields. A student must take the comprehensive exam not later than 12 months after enrollment in the PhD program. Students who do not pass the comprehensive exam may, upon the recommendation of the department, take it for a second time after an interval of at least three months. Failure on the second attempt will result in the student's discontinuation from the graduate program.

Qualifying Exam

All students must successfully complete a qualifying examination, which is to be taken at least two semesters prior to the final defense of the PhD dissertation. The qualifying exam, administered by

the dissertation committee is an oral exam in which the student presents his/her research proposal. This proposal should include the projected research methodology and anticipated outcomes, as well as the preliminary results. The objective of the oral exam is to determine whether the candidate's proposal and methodology are adequate for a PhD dissertation. The candidate must show positive preliminary results and considerable promise of original research. It is the responsibility of the student to inform and update the dissertation committee members about his/her research progress, especially during the period between the comprehensive and qualifying exams. Students who do not pass the qualifying exam are allowed to take it for a second time after an interval of three months. Failure on the second attempt will result in the student's discontinuation from the graduate program.

Admission to Candidacy

Students enrolled in the program must be admitted to candidacy at least two semesters before obtaining their PhD degree. To be eligible for candidacy, students must

- pass the qualifying and comprehensive examinations, and
- complete at least 24 credits of course work with a minimum cumulative grade average of 85.

Dissertation Requirements

In partial fulfillment of the requirements for the degree of doctor of philosophy, a student must submit a dissertation (equivalent to 24 credit hours) that is expected to make a significant and original contribution to his/her field of research. The research work is to be carried out under the supervision of a full-time faculty member from the Civil and Environmental Engineering department.

Dissertation Committee

The dissertation work will be supervised by a committee of at least four members that includes the primary dissertation adviser, two faculty members from within the same department, and a member from outside the department. The dissertation committee will be chaired by the dissertation adviser. All committee members must hold professorial rank. One of the committee members must be from outside the research group with which the candidate is associated. Qualified experts whose work is relevant to the research topic may be selected as additional members, from within or outside of AUB. It is advisable that the dissertation committee include one member from outside AUB. The PhD dissertation committee must be approved by the department and by the AUB Board of Graduate Studies.

An external reviewer, who is an authority on the dissertation subject, will be selected by the chair of the department in consultation with the dissertation adviser to review the dissertation and judge the scholarly level of the research work. The external examiner may also attend the dissertation defense and participate in the final deliberations.

Dissertation Defense

All PhD candidates must defend their dissertation in public. The candidate will be examined by the dissertation defense committee chaired by one of the members of the dissertation committee other than the dissertation adviser. A grade of pass or fail will be reported for the PhD dissertation. If a grade of fail is reported, the student may resubmit the dissertation and defend it after a period of at least four months.

Residence Requirements

To satisfy the minimum residence requirements for the PhD degree, all students must register and be in residence for at least three years beyond the completion of the master's degree. The requirements for the degree of doctor of philosophy must be completed within a period of six years after joining the PhD program. Extension beyond the six-year period will require the approval of the AUB Board of Graduate Studies.

Graduation Requirements

To earn a PhD degree in the Department of Civil and Environmental Engineering, a student must fulfill the following graduation requirements:

- Attain a minimum grade of 80 in 24 credits taken at the PhD level;
- Attain a minimum cumulative average of 85 in 24 credits of course work taken at the PhD level;
- Pass the PhD dissertation defense;
- Satisfy the minimum residence requirements;
- Present evidence of a paper submittal to a leading international journal, based on the PhD research;
- Have at least one accepted refereed conference paper, based on the PhD research
- Satisfy all pertinent AUB regulations.

Sample Study Program

A typical program of study for a PhD student is shown below.

Year	Semester	Course	Credits	Total	Timeline	
1	Fall	Major course	3			
		Major course	3			
		Minor course	3	9	Thesis Adviser Selection	
	Spring	Major course	3			
		Major course	3	15		
						Comprehensive Exam
2	Fall	Minor Course	3			
		Thesis	6	24		
	Spring	Minor course	3			
		Thesis	6	33		
					Thesis Proposal and Committee selection	
3	Fall	Minor course	3			
		Thesis	6	42		

Year	Semester	Course	Credits	Total	Timeline
	Spring	Thesis	6	48	
					Qualifying Exam
4	Fall	Thesis	0		
	Spring	Thesis	0	48	
					Thesis Defense

PhD in Civil Engineering (CE)

The concentration areas and specialized tracks of the PhD programs in CE and EWRE are consistent with the fields of expertise and research interests of the faculty members, and the existing teaching, research, and laboratory facilities, and relevant to local and regional needs.

The PhD program in CE will be offered in the following three areas of concentration:

Structural and Materials Engineering

- Advanced design and behavior of concrete, steel structures, and fiber-reinforced composites
- Strengthening and rehabilitation of structural systems; and structural health monitoring
- Advanced concrete technology including plain, hot-weathered, and high-strength concrete
- Petrographic, chemical, and mechanical properties of sands and aggregates
- Seismic evaluation and assessment, and earthquake engineering design
- Numerical modeling and computer-aided structural engineering

Geotechnical Engineering

- Land reclamation and site improvement
- Geographic Information Systems (GIS) used in decision making and expert tool applications
- Geo-environmental engineering with reference to waste disposal and site contamination
- Geotechnical earthquake engineering, geo-hazards and risk assessment

Transportation Systems

- Intelligent Transportation Systems (ITS) - traveler information systems and behavior
- Public and urban transport planning and operations
- Transport operations management
- Transport infrastructure planning and management
- Air quality linkages and modeling

PhD in Environmental and Water Resources Engineering (EWRE)

The PhD program in EWRE provides courses and research opportunities along the following specialized tracks:

- Water and wastewater treatment systems
- Solid and industrial waste management
- Air pollution control and air quality management
- Environmental and water resources management and planning
- Water resource optimization and conflict management
- GIS and IT applications in water resources
- Risk assessment, mass emergency and disaster, with particular emphasis on dam safety
- Hydrologic systems analysis and watershed modeling and management
- Hydraulic systems analysis

Course Descriptions

Structural Sequence

CIVE 610 Advanced Structural Analysis 3 cr.

A course that offers a review of matrix algebra; basic principles of structural analysis: stiffness, flexibility, and energy methods; direct stiffness method for plane and space trusses and frames; linear and non-linear problems; special problems; and computer programming and applications. *Prerequisite: CIVE 410.*

CIVE 620 Plain Concrete 3 cr.

This is a course that examines portland cements; aggregates; pozzolans; proportioning normal concrete mixtures; pumping concrete; consolidating, finishing, and curing concrete; durability; testing hardened concrete; high-strength concrete; light and heavy weight concretes; and hot and cold weather concreting.

CIVE 621 Special Topics in Concrete 3 cr.

This is a course that reviews reinforced concrete (R/C) design; torsion in R/C members; wind load on structures; earthquake load and seismic design of structures; design of shear walls; design of corbels, brackets and deep girders; circular and rectangular water tanks; and spherical. *Prerequisites: CIVE 410 and CIVE 421.*

CIVE 622 Prestressed Concrete 3 cr.

A course on materials characteristics; prestress losses; working strength design procedures; composite construction; ultimate flexural strength and behavior; continuous pre-stressed concrete members. *Prerequisites: CIVE 420 and CIVE 421.*

Materials and Pavement

CIVE 660 Pavement Engineering 3 cr.

A course examining highway and airport pavement design; flexible and rigid pavement types and wheel loads; stresses in flexible and rigid pavements; pavement behavior under moving loads; soil stabilization. *Prerequisite: CIVE 461.*

CIVE 667 Highway Materials and Construction 3 cr.

The course covers various materials constituents in highway pavement structures with emphasis on asphalt concrete, aggregate-soil mixtures, geotextiles, and bituminous liquids. Material properties, design, quality control, and methods of construction will be described. Forensic studies, distress surveys, non-destructive and accelerated pavement testing are also discussed. *Prerequisite STAT 230.*

Transportation Sequence

CIVE 661 Urban Transportation Planning I 3 cr.

An introductory course on methods and models used in transportation planning with emphasis on the urban context. *Prerequisite: CIVE 461.*

CIVE 662 Traffic Engineering 3 cr.

A course outlining traffic engineering studies; traffic control of signalized and unsignalized intersections; signal control hardware and maintenance; arterial performance and operations; and network optimization. *Prerequisite CIVE 461.*

CIVE 663 Transportation Systems Analysis 3 cr.

A course on transportation and traffic problems in modern society. Among the topics covered are travel forecasting problems and methods; theoretical techniques for traffic flow description and management; highway, railway, and runway capacity and performance characteristics; economic considerations; and cost functions.

CIVE 664 Design and Management of Transport Operations 3 cr.

A course that covers the application of quantitative techniques from operations research and probabilistic analysis to transportation problems. Applications covered include: pickup and delivery systems, emergency urban services, facility location, and network problems. *Prerequisite: STAT 230 or equivalent.*

CIVE 665 Transportation Economics 3 cr.

A course that investigates the application of economic principles to the evaluation of projects and policies in the transport sector such as transport project benefits, costs and financing, and pricing in the transport sector.

CIVE 666 Transport Operations 3 cr.

A course that introduces probabilistic and optimization methods for designing efficient operations in freight carrier, airline, transit, and traffic modes. Topics include crew and vehicle scheduling in freight, airline, and transit modes; vehicle routing problems in carrier systems; runway and air traffic operations; operations control in transit services; and fundamental relations and models of traffic flow. *Prerequisite: CIVE 461.*

CIVE 760 Public Transportation 3 cr.

A course on public transportation modes and services; single route, network, and strategic planning; tasks involved in system operations; management of public transportation; privatization issues. *Pre- or co-requisite: CIVE 661.*

CIVE 761 Urban Transportation Planning II 3 cr.

A course examining advanced topics in urban transportation planning; transportation systems management techniques; travel demand analysis; and discrete choice modeling of travel demand.

Prerequisite: CIVE 661.

CIVE 762 Traffic Flow Theory 3 cr.

A course on characteristics of traffic flow, density, and speed; models describing traffic flows; hydrodynamic analogue; and computer simulation models. *Prerequisite: CIVE 461 or equivalent.*

Environmental and Water Resources Sequence

CIVE 640 Hydraulic Structures 3 cr.

A course that covers closed conduit flow, water distribution systems, transient analysis, open channel flow, flood control, culvert hydraulics, design of various hydraulic structures. *Prerequisite: CIVE 440.*

CIVE 641 Surface Water Hydrology 3 cr.

A course on design storm, rainfall-runoff modeling, overland flow, flood routing, reservoir routing, simulation models, and stochastic hydrology. *Prerequisite: CIVE 441 or equivalent.*

CIVE 642 Groundwater Hydrology 3 cr.

This is a course that deals with properties of groundwater, Darcy's Law, steady groundwater flow, unsteady groundwater flow, well hydraulics, unsaturated flow, sea-water intrusion, and numerical modeling. *Prerequisite: CIVE 441.*

CIVE 643 Hydraulics of Open Channels 3 cr.

A course that examines gradually varied flow theory and analysis, spatially varied flow, and numerical modeling of unsteady flow in open-channels. *Prerequisite: CIVE 440.*

CIVE 644 Coastal Engineering 3 cr.

A course on small-amplitude wave theory (linear theory); finite-amplitude wave theory (nonlinear theory); cnoidal wave theory; solitary wave theory; wave refraction, diffraction, and reflection; wave forces and interaction with man-made structures; and design of maritime structures e.g. breakwaters. *Prerequisite: CIVE 440.*

**CIVE 645 Transport Phenomena in Surface
and Subsurface Waters 3 cr.**

A course on advection, diffusion, and dispersion of pollutants; transport in rivers and estuaries; transport in groundwater; numerical modeling; design of wastewater discharge system.

**CIVE 646 Water Resource Systems:
Planning and Management 3 cr.**

A course that introduces the concepts and principles of water resources planning and management. It demonstrates the logical steps in engineering planning as it applies to water resources management. The course provides coverage of mature and state of the art technologies and tools applied in the water resources industry. Emphasis will be placed on systems analysis, GIS and economic and financial analysis, environmental impact assessment techniques.

- CIVE 647** **GIS for Water Resources and Environmental Engineering** **3 cr.**
A course that introduces the concepts and principles of Geographic Information Systems (GIS) from the perspective of water resources and environmental engineering. It provides coverage of state-of-the-art GIS methods and tools specifically targeting water resources and environmental applications including: spatial and terrain analysis, geostatistical analysis, watershed delineation and identification of river networks, representation of groundwater and aquifer systems, time series analysis and development of GIS integrated water and environmental models. The course will be based on the recently released ESRI ArcGIS 9.3 and the Arc Hydro data model developed by the Consortium for GIS in Water Resources (CGWR).
- CIVE 648** **Climate Change and Water Resources** **3 cr.**
The course introduces students to the global issue of climate change and its potential impact on water resources and implications to their management particularly in the semi-arid MENA region. It explores the drivers of climate change, green house gases mitigation efforts, and adaptation options in the water resources sector with special emphasis on the Integrated Water Resources Management (IWRM) and adaptive management approach.
- CIVE 649** **Microbial Ecology and Molecular Biology for Engineers** **3 cr.**
A course that introduces students (undergraduate and graduate) from different engineering disciplines to the concepts and tools in microbial ecology and how to apply these concepts and tools to understand microbial communities underpinning environmental biotechnology processes.
Prerequisites: CHEM 202, BIOL 210, or equivalent.
- CIVE 650** **Methods of Environmental Sampling and Analysis** **3 cr.**
A course on sampling techniques and instrumental methods in environmental sciences; determination of pollutants in water, air, and soil; analytical techniques; adaptation of procedures to specific matrices; case studies.
- CIVE 651** **Environmental Chemistry and Microbiology** **3 cr.**
A course that deals with organic, inorganic, and physical chemistry; chemical equilibrium; reaction kinetics; acidity and alkalinity; composition, morphology, and classification of microorganisms; energy, metabolism, and synthesis; growth, decay, and kinetics; biological water quality indicators.
Prerequisites: CHEM 202, BIOL 210, or equivalent.
- CIVE 652** **Environmental Management and Decision Making** **3 cr.**
A course that deals with mathematical programming techniques, multi-objective optimization, and the generation of alternatives, as these are used in environmental systems analysis and management; as well as introducing how considerations such as economics, uncertainty, equity, and other sociopolitical parameters may influence environmental management and decision making.
- CIVE 653** **Water and Sewage Works Design** **3 cr.**
A course that examines the design of water and wastewater schemes, including design reports and literature search on the development of conventional treatment processes. *Prerequisite: CIVE 450.*
- CIVE 654** **Solid Waste Management I** **3 cr.**
A course on the nature and effects of solid wastes including hazardous wastes; engineering management principles, practices, and techniques for management of solid wastes administration; solid waste generation, storage, collection and transport, processing, resource recovery, and disposal; and a trip to a local facility.

Common Courses

- CIVE 670 Computer Methods in Civil Engineering 3 cr.**
A course on the use of the computer for analysis, design, and decision making in civil engineering, including programming, numerical, and CAD methods and applications. *Prerequisites: EECE 230 and CIVE 370.*
- CIVE 671 Numerical Modeling 3 cr.**
A course that deals with ordinary differential equations: initial-, boundary-, and characteristic-value problems; partial differential equations: steady state, time dependent, and oscillatory problems; techniques: Runge-Kutta, shooting, iterative, finite difference, and finite element methods.
- CIVE 672 Introduction to Geographic Information Systems 3 cr.**
An introductory course on Geographic Information Systems (GIS) and their applications in the planning and engineering fields, alternatives in computer-based graphics, data concepts and tools, network data management and planning applications, and implementation issues. This course can be taken as an elective for credit in all graduate engineering programs.
- CIVE 673 Infrastructure Systems Management 3 cr.**
A course on modeling and optimization methods and their application to inspection, performance prediction and maintenance decision making for the management of infrastructure systems.

Special Courses and Thesis

- CIVE 796 Special Projects 3 cr.**
- CIVE 797 Civil Engineering Seminar 0 cr.**
A seminar that consists of current research or applied projects presented by faculty members, students, or invited speakers.
- ENSC 690 Seminar in Environmental Sciences 0 cr.**
A seminar that consists of current research or applied projects presented by faculty members, students, or invited speakers.
- CIVE 798 Special Topics 3 cr.**
- CIVE 799 Thesis 6 cr.**
- CIVE 898 Advanced Topics in Civil and Environmental Engineering 3 cr.**
- CIVE 991 PhD Dissertation 3 cr.**
- CIVE 992 PhD Dissertation 6 cr.**
- CIVE 993 PhD Dissertation 9 cr.**
